	H4	Female life expectancy	76.2 years			-3%	

Life expectancy for both males and females has risen in recent years in Tollcross and West Shettleston but has remained below the Glasgow average. Male and female life expectancy remains significantly lower than the Scottish average.

The population in Tollcross and West Shettleston increased by 3% between 1996 and 2012, within this there was a notable increase in 45-64 years olds (+32%). The percentage of the total neighbourhood population from a minority ethnic group, while low, increased from just over 1% in 2001 to 4% in 2011 and remains lower than the Glasgow average.

Notes

1. Data sources: Scottish Index of Multiple Deprivation (SIMD) 2012, Census 2011, Census 2001, HMRC, NOMIS, National Records of Scotland (NRS) and Scottish Government.
2. Populations presented in the population trend chart and used to calculate life expectancy estimates are taken from NRS small area population estimates and are based on: the 2001 census for the years 1996 - 2001; both the 2001 and 2011 census for the years 2002 - 2010; and the 2011 census for the years 2011-2012.
3. The Income deprivation and Employment deprivation indicators are derived from SIMD 2012, more information on this deprivation index can be found at: <http://simd.scotland.gov.uk/publication-2012>
4. Life expectancies are calculated based on population estimates and death registrations. 95% confidence intervals have been added on the graphs to give an indication of their accuracy. The x-axes of the life expectancy graphs give the mid-year for each life expectancy estimate e.g. 2010 represents the life expectancy estimate for the period 2008 - 2012.
5. A notes and definitions document providing further information on the variables presented in the profile can be found in the Profiles section of the Understanding Glasgow website.
