

Glasgow North East

The Glasgow North East sector has a population of 173,089.

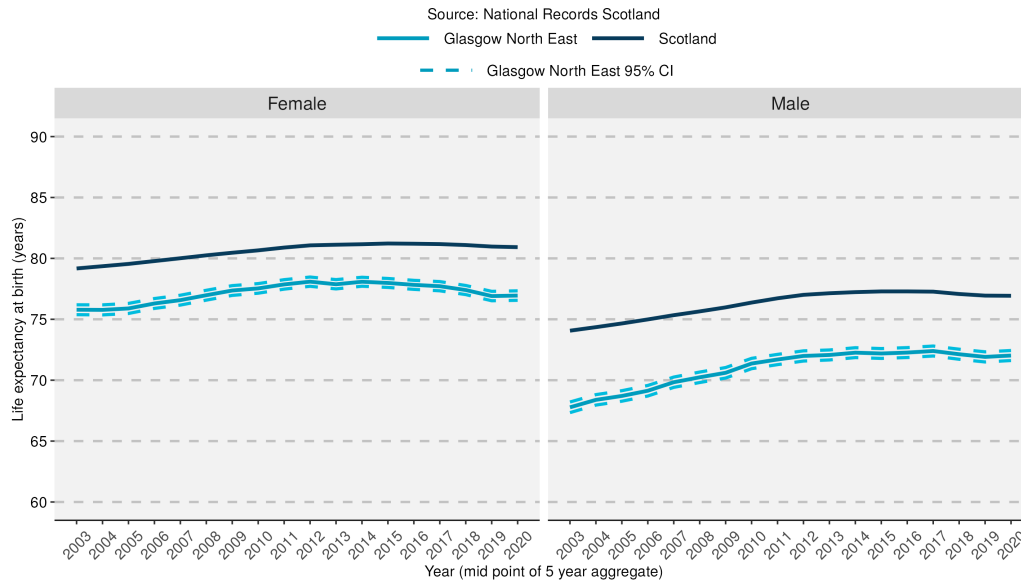

Comparisons with Scotland

Women in Glasgow North East live, on average, nearly five years longer than men. In this sector 14% of the population is from a minority ethnic background. Socially-rented households make up 42% of all households. In this area 26% of children are living in poverty and levels of income and employment deprivation are considerably higher than the Scottish average. There are 29% of people who are limited “a lot” or “a little” by disability.

Area trends

Life expectancy at birth

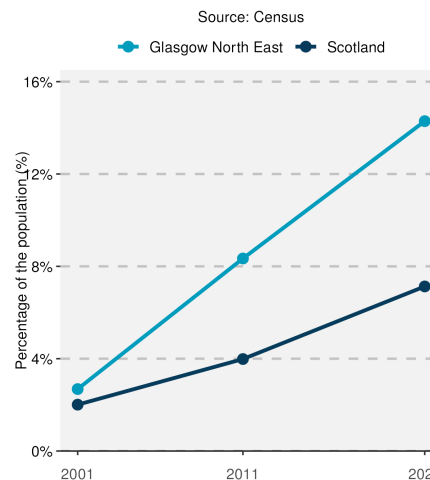

Life expectancy, since early 2000, has steadily increased for both males and females. From 2015 onward, year-on-year variations reduced, and recent data show only small fluctuations in Glasgow North East. Life expectancy is lower than both the Glasgow and Scottish average, males in particular.

Population by age group

Percentage of total population from a minority ethnic group

The overall population of Glasgow North East increased between 2001 and 2022. There are fluctuations throughout, however, there has been a higher increase in the population aged between 45-64. The percentage of the total population from a minority ethnic background increased from 2.7% in 2001 to 14.3% in 2022, this was above the Scottish average.

Notes

1. Data sources: Scottish Index of Multiple Deprivation (SIMD) 2020, Census 2022, 2011, and 2001, National Records of Scotland (NRS).
2. Populations presented in the population trend chart and used to calculate life expectancy estimates are taken from NRS small area population estimates and are based on: the 2001 and 2011 Census for years 2001-2010; and the 2011 and 2022 Census for years 2011-2022.
3. This publication has used small area population estimate data published by the NRS on 21 November 2021. The NRS update their small area population estimates and previous estimates on an annual basis therefore this data is only representative of the data published upon this date. For further information see: <https://www.nrscotland.gov.uk/publications/small-area-population-estimates-mid-2022/>
4. The Income deprivation and Employment deprivation indicators are derived from SIMD 2020, more information on this deprivation index can be found at: <https://www.gov.scot/collections/scottish-index-of-multiple-deprivation-2020/>.
5. Life expectancies are calculated based on population estimates and death registrations. 95% confidence intervals have been added on the graphs to the neighbourhood data to give an indication of their accuracy. The 95% confidence interval for the Glasgow and/or Scotland comparison line has been removed due to the size of the population. This resulted in the confidence interval sitting on the data line making it unreadable. The x-axes of the life expectancy graphs give the mid-year for each life expectancy estimate e.g. 2020 represents the life expectancy estimate for the period 2018-2022.
6. A notes and definitions document providing further information on the variables presented in the profile can be found in the Profiles section of the Understanding Glasgow website: <https://www.understandingglasgow.com/profiles/neighbourhood-profiles>.
