

Children and young people's profile - Croftfoot

Croftfoot has a population of 1,603 children and young people (aged 0–24 years).

Neighbourhood comparisons with Glasgow

There is a high proportion of children aged 0–17, while those aged 18–24 is 39% lower than the Glasgow average. The percentage of babies exposed to second-hand smoke and primary carer smoking at health visitor's first visit is lower (42% and 40% respectively). There are also below-average levels of 16-19-year-olds not in employment, education or training (36% lower), but levels of under-25s in privately-rented or rent-free housing are 53% above average. Life expectancy is higher in 2022 for both sexes than the Glasgow and Scottish averages.

Group	Indicator	Time period	Count	Rate	Difference from Glasgow	Difference from Glasgow (% , years)	
						Bar chart (left)	Bar chart (right)
Demography	Population aged 0–4	2024	320	5.3%	+15.1%	15.1%	
	Population aged 5–11	2024	473	7.9%	+17.4%	17.4%

	Hospital admissions under a mental health diagnosis**	2020-24	22	4.5	+3.2%	3.2%	
	Primary 1 children living with obesity or severe obesity	2022-24	14	8.0%	-8.7%		-8.7%
	Male life expectancy at birth	2022	79.0		+5.4	5.4%	
	Female life expectancy at birth	2022	84.1		+5.8	5.8%	

Note: Different indicators use different population bases to calculate rates, depending on the underlying data source. See definitions and data sources for more information.

All count figures of equal to or less than 5 (denoted as *) have been suppressed to avoid any potential identification.

All indicators (denoted as **) are measured as the rate per 1,000 of the whole population or of a particular age group rather than as a percentage of the population. See definitions for more information.

Neighbourhood/Area trends

Population by age group

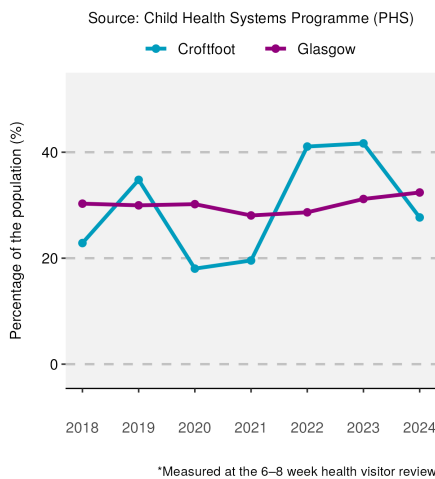

Live births (per 1,000 population)

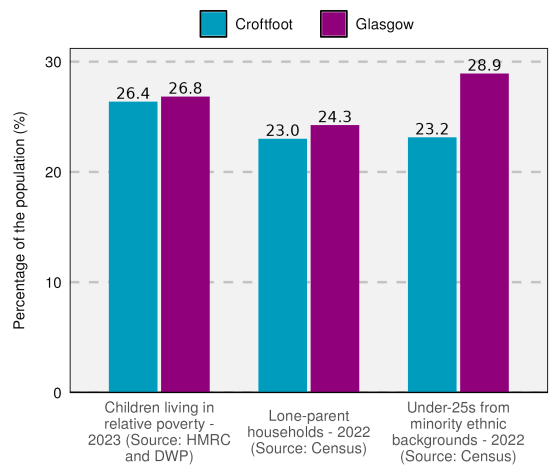

The overall population of this area has fallen by 33% since 2001. This decrease can be seen in all age groups though those aged 12–17 have the highest drop of 37%. Since 2019, the number of live births has been consistently above the Glasgow average and follow the same trends at this point.

Percentage of babies exclusively breast-fed*

Selected indicators compared to Glasgow

The proportion of babies exclusively breast-fed at 6-8 weeks varies over time but remains lower than the Glasgow average, at 28% in 2024. The percentage of children living in relative poverty, lone-parent households, and under-25s from a minority ethnic background are all slightly below average.

Notes

1. Data sources: Scottish Index of Multiple Deprivation (SIMD) 2020; Census (2001, 2011 and 2022); National Records of Scotland (NRS); Scottish Morbidity Records (SMR01 and SMR02); Child Health Systems Programme (CHSP) and CHSP Schools; Department for Work and Pensions (DWP); HM Revenue and Customs (HMRC).
2. All count figures of less than 5 (denoted as *) have been suppressed to avoid any potential identification.
3. This publication has used small area population estimate data published by the NRS on 24 February 2026. This is presented in the population trend chart and used to calculate life expectancy estimates. The NRS update their small area population estimates and previous estimates on an annual basis therefore this data is only representative of the data published upon this date. For further information see: <https://www.nrscotland.gov.uk/publications/small-area-population-estimates-mid-2023-and-mid-2024-2011-data-zones/>
4. Life expectancies are calculated based on population estimates and death registrations. 95% confidence intervals have been added on the graphs to the neighbourhood data to give an indication of their accuracy. The 95% confidence interval for the Glasgow and/or Scotland comparison line has been removed due to the size of the population. This resulted in the confidence interval sitting on the data line making it unreadable. The x-axes of the life expectancy graphs give the mid-year for each life expectancy estimate e.g. 2020 represents the life expectancy estimate for the period 2018-2022.
5. A notes and definitions document providing further information on the variables presented in the profile can be found in the Profiles section of the Understanding Glasgow website: <https://www.understandingglasgow.com/profiles/children-young-people-s-profiles>.
